DETAILED ACTION

1. The Appeal Brief filed 7/18/05 has been fully considered in preparing this Office action. Applicants' arguments provided in the Brief have overcome the objections and rejections recited in the prior Office action mailed 3/24/05. However, upon reviewing the claimed invention, the reviewing results as follows.

Claim Objections

2. Claims 6, 19, 20 and 29 are objected to because of the following informalities: the use of the word "programmally" in lines 1, 4, and 3 of claims 6, 19, and 20, respectively, which is believed editorial errors. The word "programmally" should be changed to --programmably--. Appropriate correction is required.

Allowable Subject Matter

3. Claims 1-5, 7-18, 21-28, and 30 are allowed.

4. The present invention is directed to a method and an apparatus for providing digital information for driving a display. Each independent claims 1, 11, and 21 the uniquely distinct features: "providing digital information (Fig.5, 180) including global digital information indicative of a common reference and a local digital information (Fig. 5, 186) indicative of an optical output from at least one display element" and "determining a transition (Fig. 5, 188) separating a first pulse interval (Fig. 4A, 155a) and a second pulse interval (Fig. 4A, 155b) in a modulated signal based on the digital information". The closest prior art, Walker et al (U.S. Patent No. 5,977,942), and Worley, III et al (U.S. Patent No. 6,072,452) disclose conventional SLM devices, which use common reference voltage waveforms for providing PWM pulses;

however, either singularly or in combination, fails to anticipate or render the above underlined limitations, which are in combination with other claimed limitations, obvious as specifically pointed out by the applicants (see pages 11-12 of the above-identified Appeal Brief).
